

The colonequals package

Heiko Oberdiek
<oberdiek@uni-freiburg.de>

2006/08/01 v1.0

Abstract

Package `colonequals` defines poor man's symbols for math relation symbols such as "colon equals". The colon is centered around the horizontal math axis.

1 User interface

1.1 Introduction

Math symbols consisting of the colon character can be constructed with the colon text character, if the math font lacks of the complete symbol. Often, however, the colon text character is not centered around the math axis. Especially combined with the equals symbol the composed symbol does not look symmetrically. Thus this packages defines a colon math symbol `\ratio` that is centered around the horizontal math axis. Also math symbols are provided that consist of the colon symbol. The package is not necessary, if the math font contains the composed symbols. Examples are `txfonts` ([1]) or `mathabx` ([2]).

1.2 Symbols

All symbols of this package are relation symbols. The relation property can be changed by the appropriate T_EX command `\mathbin`, `\mathord`, ...

Table 1: Unicode mathematical operators

U+2236	RATIO	:	<code>\ratio</code>
U+2237	PROPORTION	::	<code>\coloncolon</code>
U+2239	EXCESS	:-	<code>\colonminus</code>
U+2254	COLON EQUALS	:=	<code>\colonequals</code>
U+2255	EQUALS COLON	=:	<code>\equalscolon</code>

The following grammar generates all symbols that are supported by this package:

Table 2: Symbol grammar

symbols	::=	col
		col symbol
		symbol col
		;
col	::=	'.'
		'::'
		;
symbol	::=	'='
		'−'
		'≈'
		'∼'
		;

Table 3: All relation symbols

:	<code>\ratio</code>
::	<code>\coloncolon</code>
:=	<code>\colonequals</code>
::=	<code>\coloncolonequals</code>
=:	<code>\equalscolon</code>
=::	<code>\equalscoloncolon</code>
:-	<code>\colonminus</code>
::-	<code>\coloncolonminus</code>
−:	<code>\minuscolon</code>
−::	<code>\minuscoloncolon</code>
:≈	<code>\colonapprox</code>
::≈	<code>\coloncolonapprox</code>
≈:	<code>\approxcolon</code>
≈::	<code>\approxcoloncolon</code>
:~	<code>\colonsim</code>
::~	<code>\coloncolonsim</code>
~:	<code>\simcolon</code>
~::	<code>\simcoloncolon</code>

1.3 Fine tuning

The distances in composed symbols can be configured:

`\colonsep`

Macro `\colonsep` is executed between the colon and the other symbol.

`\doublecolonsep`

Macro `\doublecolonsep` controls the distance between two colons.

1.3.1 Example

```
\renewcommand*{\colonsep}{\mskip-.5\thinmuskip}
```

2 Implementation

2.1 Identification

```
1 (*package)
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{colonequals}%
4 [2006/08/01 v1.0 Colon equals symbols (H0)]
```

2.2 Distance control

`\colonsep`

```
5 \newcommand*{\colonsep}{}%
```

`\doublecolonsep`

```
6 \newcommand*{\doublecolonsep}{}%
```

2.3 Centered colons

```
7 \def\@center@colon{%
8   \mathpalette\@center@math{:}%
9 }
10 \def\@center@math#1#2{%
11   \vcenter{%
12     \m@th
13     \hbox{#1#2}%
14   }%
15 }
```

`\ratio` Because the name `\colon` is already in use, the Unicode name `\ratio` is used for the centered colon relation symbol. (The `\ratio` of package `calc` is not used outside `calc` expressions.)

```
16 \newcommand*{\ratio}{%
17   \ensuremath{%
18     \mathrel{%
19       \@center@colon
20     }%
21   }%
22 }
```

`\coloncolon`

```
23 \newcommand*{\coloncolon}{%
24   \ensuremath{%
25     \mathrel{%
26       \@center@colon
27       \doublecolonsep
28       \@center@colon
29     }%
30   }%
31 }
```

2.4 Combined symbols

```

32 \def\@make@colon@set#1#2{%
33   \begingroup
34     \let\@center@colon\relax
35     \let\newcommand\relax
36     \let\ensuremath\relax
37     \let\mathrel\relax
38     \let\colonsep\relax
39     \let\doublecolonsep\relax
40     \def\csx##1{%
41       \expandafter\noexpand\csname ##1\endcsname
42     }%
43   \edef\x{\endgroup
44     \newcommand*{\csx{colon#1}}{%
45       \ensuremath{%
46         \mathrel{%
47           \@center@colon
48           \colonsep
49           {#2}%
50         }%
51       }%
52     }%
53     \newcommand*{\csx{coloncolon#1}}{%
54       \ensuremath{%
55         \mathrel{%
56           \@center@colon
57           \doublecolonsep
58           \@center@colon
59           \colonsep
60           {#2}%
61         }%
62       }%
63     }%
64     \newcommand*{\csx{#1colon}}{%
65       \ensuremath{%
66         \mathrel{%
67           {#2}%
68           \colonsep
69           \@center@colon
70         }%
71       }%
72     }%
73     \newcommand*{\csx{#1coloncolon}}{%
74       \ensuremath{%
75         \mathrel{%
76           {#2}%
77           \colonsep
78           \@center@colon
79           \doublecolonsep
80           \@center@colon
81         }%
82       }%
83     }%
84   }%
85   \x
86 }

87 \@make@colon@set{equals}{=}%
88 \@make@colon@set{minus}{-}%
89 \@make@colon@set{approx}{\approx}
90 \@make@colon@set{sim}{\sim}
91 \end{package}

```

3 Installation

CTAN. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/colonequals.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/colonequals.pdf](#) Documentation.

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain- \TeX :

```
tex colonequals.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
colonequals.sty → tex/latex/oberdiek/colonequals.sty
colonequals.pdf → doc/latex/oberdiek/colonequals.pdf
colonequals.dtx → source/latex/oberdiek/colonequals.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

Refresh file databases. If your \TeX distribution (te \TeX , mi \TeX , ...) rely on file databases, you must refresh these. For example, te \TeX users run `texhash` or `mktextlsr`.

3.1 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk colonequals.pdf unpack_files output .
```

Unpacking with \LaTeX . The `.dtx` chooses its action depending on the format:

plain- \TeX : Run `docstrip` and extract the files.

\LaTeX : Generate the documentation.

If you insist on using \LaTeX for `docstrip` (really, `docstrip` does not need \LaTeX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{colonequals.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdf \LaTeX :

```
pdflatex colonequals.dtx
makeindex -s gind.ist colonequals.idx
pdflatex colonequals.dtx
makeindex -s gind.ist colonequals.idx
pdflatex colonequals.dtx
```
