

mnotes

Matthias Borck-Elsner

October 17, 2011

Name of contribution:	mnotes
Version	2 2011-10-17
Author's name:	Matthias Borck-Elsner
Author's email:	matthias at kleinesnetzwerk.net
Location on CTAN:	http://mirror.ctan.org/macros/latex/contrib/mnotes/mnotes.sty
Summary description:	Flexible notes in texts, tables and images or a bibliography, like footnotes and endnotes.
License type:	lppl
Announcement text:	sty file to place notes into text, tables, equations and images or a bibliography and list them. For every purpose a note command is defined: mnote, tab., math., img... New commands are defined: \ruler \imgwidth and \imgheight The endnotes still work! mnotes is based on endnotes.sty Copyright 2002 John Lavagnino.

1 mnotes

The mnotes are similar to endnotes, you put a `\mnote{textofmnote}` ¹ into your text, a mark is displayed and by calling `\themnotes[mnotes]` the notes are listed. All notes up to this point will be listed ²

mnotes

¹textofmnote

²textof2mnote

Next call will list the following notes up to the second call, if no new note is set, the last known note will be repeated.¹ As you can see, the name of the notes is optional ² and formatted as a subsubsection

optional

¹textof3mnote

², you may leave it empty

2 tabnotes

Table 2: newtable

<code>\tabnote{tabnotetext}</code> is used in the same way, they can be set into tables ¹ and texts and are called by <code>\thetabnotes[tabnotes]</code>	The difference ¹ is, that <code>\thetabnotes[]</code> , if called inside the table, displays the notes up to that point, if you do not call the notes in columns or the table, you might call them at the end of the table, under the table or at end document.
column1 ¹ This is a longtable	column2 ¹ difference

Table 3: outside

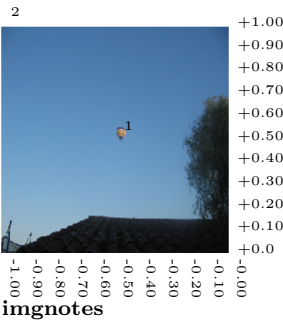

In this example, the notes are called after the table and outside ¹	of the environment. If you like, you may ² and impress someone.
--	--

outside

¹outside
²put your notes under the table

3 imgnotes

You might want to put notes into images with some help of a ruler...

¹Hot air balloon
²There's something special ...

Use `\putimgnote{-1}{+1}{There's something special ... }` or any value you

take from the ruler. The ruler takes its values from `\imgsize`, therefore it has to be called right after the image. If not called, the ruler will not be displayed.

4 mathnote

You might even put notes into equations. . . notes in equations are colored red .

$$42^{\textcolor{red}{1}} = \sqrt{mc^2} \tag{1}$$

¹The answer, for now

5 bibnote

You might use bibnotes "The answer, for now "[¹] as a bibliography inserting a `\bibnote{Borck-Elsner,2011}`(example) after the citation . The source will be displayed later by calling `\thebibnotes[Bibliography]` (name is optional). Formatting inside the bibnotes ist free.[²]

6 Why this was called "tablenotes" at first

When I first was involved, the question was, how to set notes into tables **and** to display them as tables.

Table 4: tablenotes

This is a tabnote ¹	This is a tabnote ¹
¹ This is a tabnote	¹ This is a tabnote

The namings and functions collided with the `threeparttable` package, so I decided to rename my package "mbenotes"
